

Lockdown Science Support for home-schooling

So, we are back in lockdown and that means finding ways to teach science online for many of your students.

Not an easy task when we are so used to teaching hands on science. Writing easily accessible lesson plans with simple resources, for parents, can be very time consuming and tricky.

This session aims to help you save time and have access to a wide range of resources that you can easily and quickly use to make sure your students are still getting good quality science learning whilst in lockdown at home.

We will look at a variety of resources that are free to use that are available online, discover some quick and easy ways to create your own engaging online lessons that fit your topic and hopefully share good practice from other participants.

As a result of this online session, you will be able to:

- Access a wide variety of online learning resources for home schooling in science.
- Discover new and creative ways to enrich and enhance your teaching of online science and make it relevant and enjoyable for your pupils.
- Feel confident to create alternative learning opportunities for home schooling to develop pupils' progress in science.

This is a two-hour online workshop is suitable for class teachers, TAs and Subject leaders.

Date – 8th February 3.45 to 5.45pm

Cost - £25 per person **or** £60 per school allowing any staff member to join the training. (plus vat)
